

Giatic's innovative corrosion detection technology, iCOR™, was featured in an article entitled "Finding the cracks" in the July/August issue of the Engineering Dimensions - the magazine of the Professional Engineers of Ontario. iCOR™ utilizes cutting-edge technology to detection corrosion of steel rebar in concrete and, more importantly, measure the rate of corrosion accurately.

“Our key value proposition is that we give infrastructure owners a better and more accurate tool to prioritize their limited funding for the repair of infrastructure. Our technology is about enabling the owner or engineer to make decisions about maintenance and repair and direct those repairs more intelligently.”
