

MTEC Company Exclusively Brings Giatic Products to the South Korean Market

Following a visit to Giatic's Ottawa office earlier this week, [Measuring Technology Co. \(MTEC\)](#), a distributor of smart technology for the construction industry, will now be providing Giatic products to the construction industry across South Korea.

MTEC Co. is a leading supplier of measurement equipment and instruments. They are proactive in the adoption of new and emerging measurement technologies relating to construction, data processing, and program development, and strive to deliver high-quality products to their customers. The demand for various sensors and technology for the construction industry and related fields has allowed MTEC Co. to be a front-runner in the South Korean market.

During their visit with Giatic, MTEC Co. took part in hands-on training covering all Giatic products including field measurement devices and lab equipment. They partook in a site visit where they were able to see the products being used on the field and gain experience that will be transferable to their customers. MTEC Co. representatives discussed sales and

marketing strategy with Giatec's Sales & Business Development Manager as part of their new dealer onboarding training.

Giatec Scientific is a global retailer and leading developer of non-destructive devices for concrete construction. They bridge the gap between tradition and technology by providing innovative solutions for ready-mix producers, property managers, and engineers.

Giatec's specialized products range from embedded sensors for strength testing, portable corrosion detectors, and lab equipment are made to optimize work plans and increase productivity. The dream behind real-time data updates from one job-site to another is materialized with their in-situ sensors. Together, Giatec and its distributors such as MTEC Co. are working towards smarter ways of building.
