

We are proud to have supported Keytec Inc, Giatec's exclusive agents in Japan at this year's PV System Expo in Tokyo, Japan. Keytec's sales team performed a creative and entertaining demonstration of the newly launched, [Giatec iCOR](#). As the first device on the market to detect the corrosion rate without making a connection to the rebar, Keytec put on a "magic show" to demonstrate the device's unbelievable abilities. We want to thank Keytec Inc. and our other agents worldwide for their ongoing support and efforts throughout the introduction of the Giatec iCOR. Have a look at the clip of their demonstration during the exhibition below. Here is also the [link to iCOR on keytec's website](#).
